

FOR IMMEDIATE RELEASE

## *forward look, inc.* launches RiskForecast™ for Investment Managers

**BOSTON, MA – 15 Oct 2007 -- *forward look, inc.* announces the launch of RiskForecast™, an innovative analytic service that enables investment managers to proactively identify and resolve potential shortfalls in portfolio performance stemming from the quality of their investment operations.**

RiskForecast™ provides investment managers with an unbiased technique to ensure that their investment operations can deliver the full value inherent in their investment ideas. Using proprietary analytics, the RiskForecast™ service generates forward-looking, multi-factor profiles that generate an incisive continuous ‘look-through’ at the quality of their own operations.

RiskForecast™ is designed to enable actionable improvements in performance within six to twelve months of implementation. Optimizing investment operations can return risk-adjusted performance gains ranging from 50 to 250 basis points.

Chito Jovellanos, President and CEO of *forward look, inc.* said “RiskForecast™ was developed from seven years of observation and research. As part of its launch, we are presenting the results of our research that demonstrate the measurable contribution of investment operations quality to portfolio performance at the *Plan Sponsor & Consultant Circle Summit* in San Francisco”.

RiskForecast™ uses transactional and reference data drawn from the investment manager’s operations and quantifies the informational latency inherent in a manager’s data flows. Information latency dampens the ability of people and systems to simultaneously deliver and act on investment data in a timely manner. Given the dynamic nature of markets and the fleeting nature of opportunities, information latency significantly constrains the ability of an investment manager to deliver the alpha embedded in their underlying strategies.

*forward look, inc.* is a Boston-based advisory that enables investment managers to significantly improve product performance and minimize implementation shortfalls associated with complex product development initiatives. For more information on the RiskForecast™ service, please see [www.riskforecast.com](http://www.riskforecast.com), or contact *forward look, inc.* at +1 617 956-2239 or [inf@forwardlook.com](mailto:inf@forwardlook.com)
